

ATLANTIC FIRE LTD

Fire alarms are our business
and keeping you safe is our duty

COMPANY BROCHURE

AFFILIATE

Our engineers and creative design team have the skills necessary to get the right results for your property.

Introduction

Fire alarms are our business and keeping you safe is our duty

WE HAVE examined the fire industry for the last 30 years. With this collective experience, our aim is not to be the biggest fire alarm company, but the best fire alarm company. It's not about what we do that makes us good, or about how we do it that makes us great. It's simply why we do it.

Everything we do is a challenge to the status quo; to think differently, to make our next job better than our last job, that's the most important thing.

We have the experts, we have the standards and we have the high quality workmanship. We think about the fire alarm systems in a whole new way.

We want lives to be protected. And that no family or business should suffer any

loss, because a company needs to meet a financial target.

When you contact us we don't see it an opportunity to outbid our competitors – because that's not what we are here to do.

Every day our team of creative engineers design, install and maintain fire equipment to the highest standard. We follow strict BSI processes to ensure that all systems are built to be dependable and reliable and our engineers receive regular training on all new systems and software updates.

We provide the best service to our customers without compromising on quality.

We look forward to partnering with you to help you get ahead.

What we do

Fire Alarm Service and Maintenance

We have fully skilled Fire Alarm Engineers, our team have over 30 years collective experience and are vastly familiar with all types of Fire Alarm systems. They have the ability to work on a close protocol system ranging from Gent Vigilon Panels, Notifier Fire Panel, Ziton Fire Panel, Siemens Fire Panel and ADT Fire Panel. Also a vast range of open protocol systems including Advance Panel, C-TEC Panel, Ampac Panel, Kentec Panel, **conventional panels and Addressable panels.**

Our engineers do a step by step inspection of the fire alarm panel and go through any defects. We carry a vast amount of stock on each vehicle, ranging from smoked devices to batteries and sounders, we equip our engineers to resolve your problem.

Having a **fire alarm maintenance contract** in place for your fire equipment is not just important, but essential for ensuring your system works when you need it most – in an emergency. Preventative inspections identify potential problems before they occur and can be resolved as a priority if required. We can offer a Daily Check or Weekly Test.

Atlantic Fire Alarm Engineers have the full knowledge of most manufacturers equipment and their products. Regular training on new fire alarm systems and ventilation systems are carried out and our engineers undertake a mandatory refresher course on fire extinguishers and fire alarms every three years.

If you are looking for a highly capable fire contractor who has a proven track record of delivering successful fire alarm service work, don't hesitate to **contact us on 0333 444 0443**. We have the accreditations, committed Customer Service and Engineering Team to deliver a first class service fire solution best suited to your individual business needs.

What we do

Fire Alarm Installation

Whether you want a completely new fire alarm installation or you wish to add to an existing system, our engineers and creative design team have the skills necessary to get the right results for your property.

We believe it's right to take the time to conduct a full fire survey to get the appropriate specification for your property, before giving you a recommendation on the type of system you need which will cater for your individual requirements whilst ensuring that it is installed in line with all current fire safety legislation requirements.

Whether you choose to install a conventional, addressable or the latest wireless technology fire alarm, the installer will provide you with great service and a great experience.

 All our installations carry a 12 months no quibble guarantee.

When installing a fire system on a customer site we are determined to find the best route to install fire cable to the last foot.

We will commission to BS5839-Pt1 and BS5839-Pt6 using our own engineers.

We can also commission fire alarm systems that have been fitted by other contractor's with a step-by-step checklist to ensure compliance with the British Standard, on completion.

Our biggest strength is that we provide great products at better prices.

What we do

Emergency Lighting

Not only do emergency lighting fixtures look great and can be decorative, but they make evacuation safer and more efficient in order for your staff and visitors to escape in the event of an emergency.

Atlantic Fire's experienced and qualified team of fire safety experts are on hand to design, supply, install and maintain emergency lighting technology which complies with all British and European emergency lighting standards, in particular BS5266 for the design, manufacture and installation of emergency lighting.

Most of our engineers come from an electrical background and have the full knowledge of the lighting circuitry as well as MCB rating and load max ratings. We are also able to do lighting calculations to determine the total number of luminaries required for the fire escape route.

Get in touch with Atlantic Fire on 0333 444 0443 today to discuss how we can provide you with an effective installation or maintenance proposal for your emergency lights so that you can be reassured that your emergency lights work when you need them the most.

What we do

Fire Extinguishers

Fire extinguishers can often be the first line of defence for your business. With the huge variety available, you need to be sure that the extinguishers you have will fight the type of fire that starts, and they're in perfect working order when you need them.

All fire extinguishers supplied by Atlantic Fire Ltd are manufactured to the highest standard in the UK, approved to BS EN3 and carry the British Standard Kitemark as your guarantee of quality. Fire extinguishers should be regularly serviced to ensure they remain in good working order and function correctly should they be needed. Simply buying an extinguisher is not the end of your worries, but a properly maintained extinguisher can be.

Our engineers are trained to
BAFE Standards for the servicing
of fire extinguishers.

The fire extinguishers we supply are designed to be user friendly and effective, with squeeze grip operation, controllable discharge, colour coding to help operators identify the correct extinguisher type and clear printed instructions.

Our engineers are accredited to BAFE SP101 and are competent in servicing portable fire extinguishers so that we carry out a thorough inspection even to the cleaning down of the Fire Cylinder, which should give you and your clients the confidence that their equipment will perform at the time that it is most needed.

Get in touch with us today on **0333 444 0443** to discuss how we can help your business.

What we do

Access Control service and maintenance contract

Access Control systems can be critical to ensuring the safety of employees, visitors and the general public, limiting access to business sensitive or hazardous areas and from a security point of view so that you know who is present on site. You will want your system to be working at optimum performance and partnering with Atlantic Fire Ltd will ensure this essential system is regularly and professionally maintained. Our engineers are highly trained in servicing and maintaining a variety of Access Control systems including Paxton.

As part of an Access Control service visit, a specially trained Atlantic Fire Ltd engineer will inspect all parts of your system to prevent problems from occurring. Areas inspected include:

- Door mechanisms and readers – cleaning and checking units and connections
- Visual inspection – inspecting all major components and cabling for signs of deterioration
- Control unit – checking performance
- Keypads – checking for correct operation
- Display and software (if applicable) – checking functions and performance
- Operation – performing site assessment
- Power – testing power supply and back up unit condition and performance
- Alarm inputs – checking operation and response

Each visit is fully documented by our expert team who will also advise on any future works required.

What we do

Fire Risk Assessment

The Regulatory Reform Fire Safety Order (2005) puts the responsibility firmly on businesses to carry out their own Fire Risk Assessments. These involve assessing the risk and probability of a fire and its consequences and then implementing the appropriate measures to eliminate or reduce these risks.

The Fire Risk Assessments involves a physical inspection of the building to determine the adequacy of the existing fire precautions and the need for any additional measures.

We offer a professional fire risk assessment of your business sites with a clear pricing structure and a full report about the findings. Our dedicated team will conduct your risk assessment professionally and efficiently.

 We employ only the most experienced professionals to deliver a consistent service

Fire Risk Assessment consultancy

Our Fire Risk Assessment consultancy approach is ideally suited for medium to high risk workplaces, or where there are no suitably qualified, trained or experienced fire safety personnel within your organisation. We are able to offer a comprehensive and consistent risk management service to your business.

Visit us at: atlanticfireltd.com

What we do

Atlantic Fire Ltd views risk assessments as a partnership. Where appropriate, we will look to work with employers and employees alike to minimise the risks and ensure staff know what to do in the event of a fire.

Reporting and follow up

Once a visit has taken place, our consultants will provide a comprehensive written report to help you complete the actions identified to minimise fire risk and demonstrate compliance with your legal and insurance obligations. Personally tailored and easy to understand, each report includes a priority action list to get your premises safe and up to standard, and fully complies with the requirements of the new legislation including, fire fighter safety, and consideration to the spread of fire. It also takes into consideration the needs of younger workers.

Get in touch with us today on **0333 444 0443** to discuss how our Fire Risk Assessment service can help your business.

Atlantic Fire Ltd views fire risk assessments as a partnership with your organisation.

What we do

24 hour Emergency Response

We appreciate that sometimes things can go wrong, even with the very best equipment. In business, it is absolutely vital that this is rectified as quickly as possible so that your business is not disrupted.

At Atlantic Fire, we provide all our clients with a 24 hour, 365 days rapid response service to assist in a wide range of emergency situations that are not appropriate for a 999 Fire Brigade call-out.

Our emergency engineers carry a vast amount of stock on the vehicle to meet the need of every emergency call-out.

Great benefits!

- ✓ **Free Unlimited** access to a 24 hour technical assistance by our engineers.
- ✓ **Alarm Call out fee reduced to £99** when you take a out a contract.
- ✓ We've made **hundreds of clients happy**.
- ✓ **Excellent response times:**

Working hours	3hrs maximum response time
Out of hours	4hrs maximum response time

*Did you know? *On average most of our clients are seen within 2hrs. **
- ✓ **1 hour response target** - as a growing vibrant company, our ultimate target is to give all our customers a 1 hour response.

Why have a service and maintenance contract?

Having a regular service and maintenance contract in place for your fire and security equipment is essential for ensuring your system works when you need it most – in an emergency. Preventative inspections identify potential problems before they occur and can be supported with a rapid, prioritised response if required.

Peace of mind

You depend on your fire and security systems to provide the earliest warning of fire or a security breach for your staff and visitors. So it makes sense that your systems are kept in optimum condition, with 24/7 emergency cover that you can always count on if needed.

Save money

Regular servicing will ensure your system works longer and results in lower system downtime. You will also save money by avoiding unscheduled call outs.

Legislation and Compliance

Current fire legislation and security industry standards including EN Standards, NSI, the Police, the Data Protection Act and Health and Safety Act require that all fire and security systems that fall within their remit are covered under a formal maintenance agreement.

Specifically The Fire Safety Order came into effect in October 2006 and consolidated over 100 pieces of fire legislation.

Stay covered

In the unfortunate event of a fire you will be required to prove that your fire safety equipment was fit for purpose and also regularly maintained. Failure to do so could lead to prosecution under The Regulatory Reform (Fire Safety) Order 2005 or The Fire Safety (Scotland) Regulations 2006.

Your insurance company will also usually require you to regularly maintain your security system, and if appropriate cover is not in place, then any claim may be invalid. In addition, all security systems that are linked to the Police or financed under a Lease Agreement must have a current service and maintenance contract in place.

Have an emergency? Call us on **0333 444 0443**

No matter what time of day or night, one of our engineers will be dispatched to your commercial or industrial property.

Clients

A small selection of the clients we serve

ST CLEMENT DANES CHURCH OF ENGLAND PRIMARY SCHOOL

400 year old well known school located in Drury Lane at the heart of London. This landmark monument icon in the city of London had a fragile fire alarm system that we rectified. We have an ongoing maintenance contract with this client.

THE GALA BINGO HALL

Built in 1900's. One of the renown Waltham Forest London Landmark buildings. We have an ongoing maintenance contract with this client.

Roger la Borde

ROGER LABORDE PROPERTIES

We installed fire fighting equipment for the properties. We worked very closely as a team with Local Authorities and Fire Officers during the contract and used various documentation provided by them to ensure all our work met with the high standard demanded by the contract.

HUMPHREYS & CO PROPERTY MANAGEMENT

We maintain and manage over 200 properties for Humphreys and Co Property Management. We are the rapid response unit for this client and provide ongoing fire alarm maintenance contract.

Capabilities and accreditation

Accredited to keep you safe

Quality, Health & Safety, Environment - These are the watchwords of our company standards. Every day in every way we strive to put these standards foremost in the planning, design, installation and maintenance of all systems we install and maintain, whatever the scale. See below some of the major accreditations we hold.

Customer Service

At Atlantic Fire, we take our commitment to our customers very seriously. We work hard to ensure that we offer first class customer care. We value our customers that is why we put so much work in training our engineers.

Atlantic Fire engineers are clean, smart, well spoken and always look presentable. All our engineers dress according to company policy in full uniform, Personal Protective Equipment (PPE) to ensure that they can carry out their functions in accordance with the recommendations of the Health & Safety at Work Act.

Ultimately, our aim is to offer great service with every interaction between Atlantic Fire engineers and the customer.

We don't set out to be the cheapest company out there – we strongly believe that many customers have been with us because we deeply care about their business and we respond quickly and promptly to their needs.

That's the Atlantic Fire way for customer service.

Data Protection

We place a high value on protecting sensitive information from reaching the wrong people and thereby undertake three procedures regarding the data protection act.

In this context, **confidentiality** is a set of rules that limits access to information, **integrity** is the assurance that the information is trustworthy and accurate, and **availability** is a guarantee of reliable access to the information by authorised people.

Atlantic Fire place a high value on protecting sensitive information from reaching the wrong people.

Each client we serve receives a high quality service with no compromises.
